HEALTHCARE

Managing AI Risk in Healthcare

In healthcare, AI risk is judged under consequence: patient safety, PHI handling, and regulated workflows. Governance must be continuous, evidence-backed, and operational, not policy-only. Defensibility is proven when data, model, platform, and decision controls remain auditable over time.

Healthcare | AI Governance | Compliance | Data Residency

EXECUTIVE SUMMARY

What's changing

AI is moving deeper into clinical support and operational workflows where model quality and PHI handling have direct consequence.

What can fail

PHI exposure, model drift, bias, misconfiguration, and vendor data leakage can create simultaneous safety and compliance breakdowns.

What leaders must do now

- Establish a live AI inventory linked to accountable owners.
- Require evidence lineage for high-impact model and access decisions.
- Operationalize exception approvals with clear expiry and review cadence.

If you do nothing

Programs may look compliant on paper but fail during HIPAA scrutiny, vendor due diligence, or clinical incident review.

BOARD TAKEAWAYS

- ✓ AI safety and privacy are inseparable in healthcare. Proof: linked PHI flow controls and model safety thresholds.
- ✓ Evidence freshness determines defensibility. Proof: timestamped evidence samples for high-impact controls.
- ✓ Exception governance must be explicit. Proof: approved exceptions with rationale, owner, and expiry compliance.
- ✓ Deployment choice is a risk decision. Proof: model-by-model residency and isolation mapping.
- ✓ Continuous monitoring is non-optional. Proof: drift alerts with documented response actions and closure trend.

ENGAGEMENT PATHWAY

1

Phase 1 (2 weeks): Scope + inventory + baseline defensibility

Outputs: AI inventory, PHI mapping, top exposure list, evidence baseline.

2

Phase 2 (4-6 weeks): Evidence pipelines + exception workflow + monitoring

Outputs: exception register, decision log template, monitoring thresholds, audit-ready reporting pack.

3

Phase 3 (ongoing): Executive cadence + continuous improvement

Outputs: monthly executive risk brief, evidence freshness dashboard, drift review cadence.
